

Snappe

Formalizing East Africa's Second-Hand Clothing Trade

From beta to MVP: 1,000+ vendors, 100+ riders, and a banking partner.

Currently paused.

KENYA, UGANDA, NIGERIA

The issue isn't volume. It's data.

A \$600M+ addressable secondhand-clothing retail market across Kenya, Uganda and Nigeria

40% of bales entering Ghana's Kantamanto market leave as waste

458 of 900 million garments imported into Kenya in 2021 were unsellable on arrival

No participant in the chain captures what actually sells, at what price

The EU's Waste Shipment Regulation bans exporting ungraded textile waste to non-OECD countries from May 2027

\$600M+

addressable secondhand-clothing retail market across Kenya, Uganda and Nigeria

40%

of bales entering Ghana's Kantamanto market leave as waste

458

of 900 million garments imported into Kenya in 2021 were unsellable on arrival

May 2027

EU regulation bans exporting ungraded textile waste to non-OECD countries

Hypothesis and validation approach.

HYPOTHESIS

Digitizing vendor inventory, embedding working-capital financing, and building last-mile logistics creates the missing **transaction-data layer** that formalizes the trade.

VALIDATED AGAINST DIRECT PRECEDENTS

Zumi

proved commercial demand (\$20M+ cumulative sales, 3M garments/month) before falling on capital sustainability

Sendy

proved last-mile logistics is the hardest part of the model

PHASED PROOF-OF-CONCEPT SEQUENCING

EVIDENCE

Operational traction is real.

1,000+

vendors onboarded

100+

riders

500+

cash-in-cash-out agents

1

banking partner secured

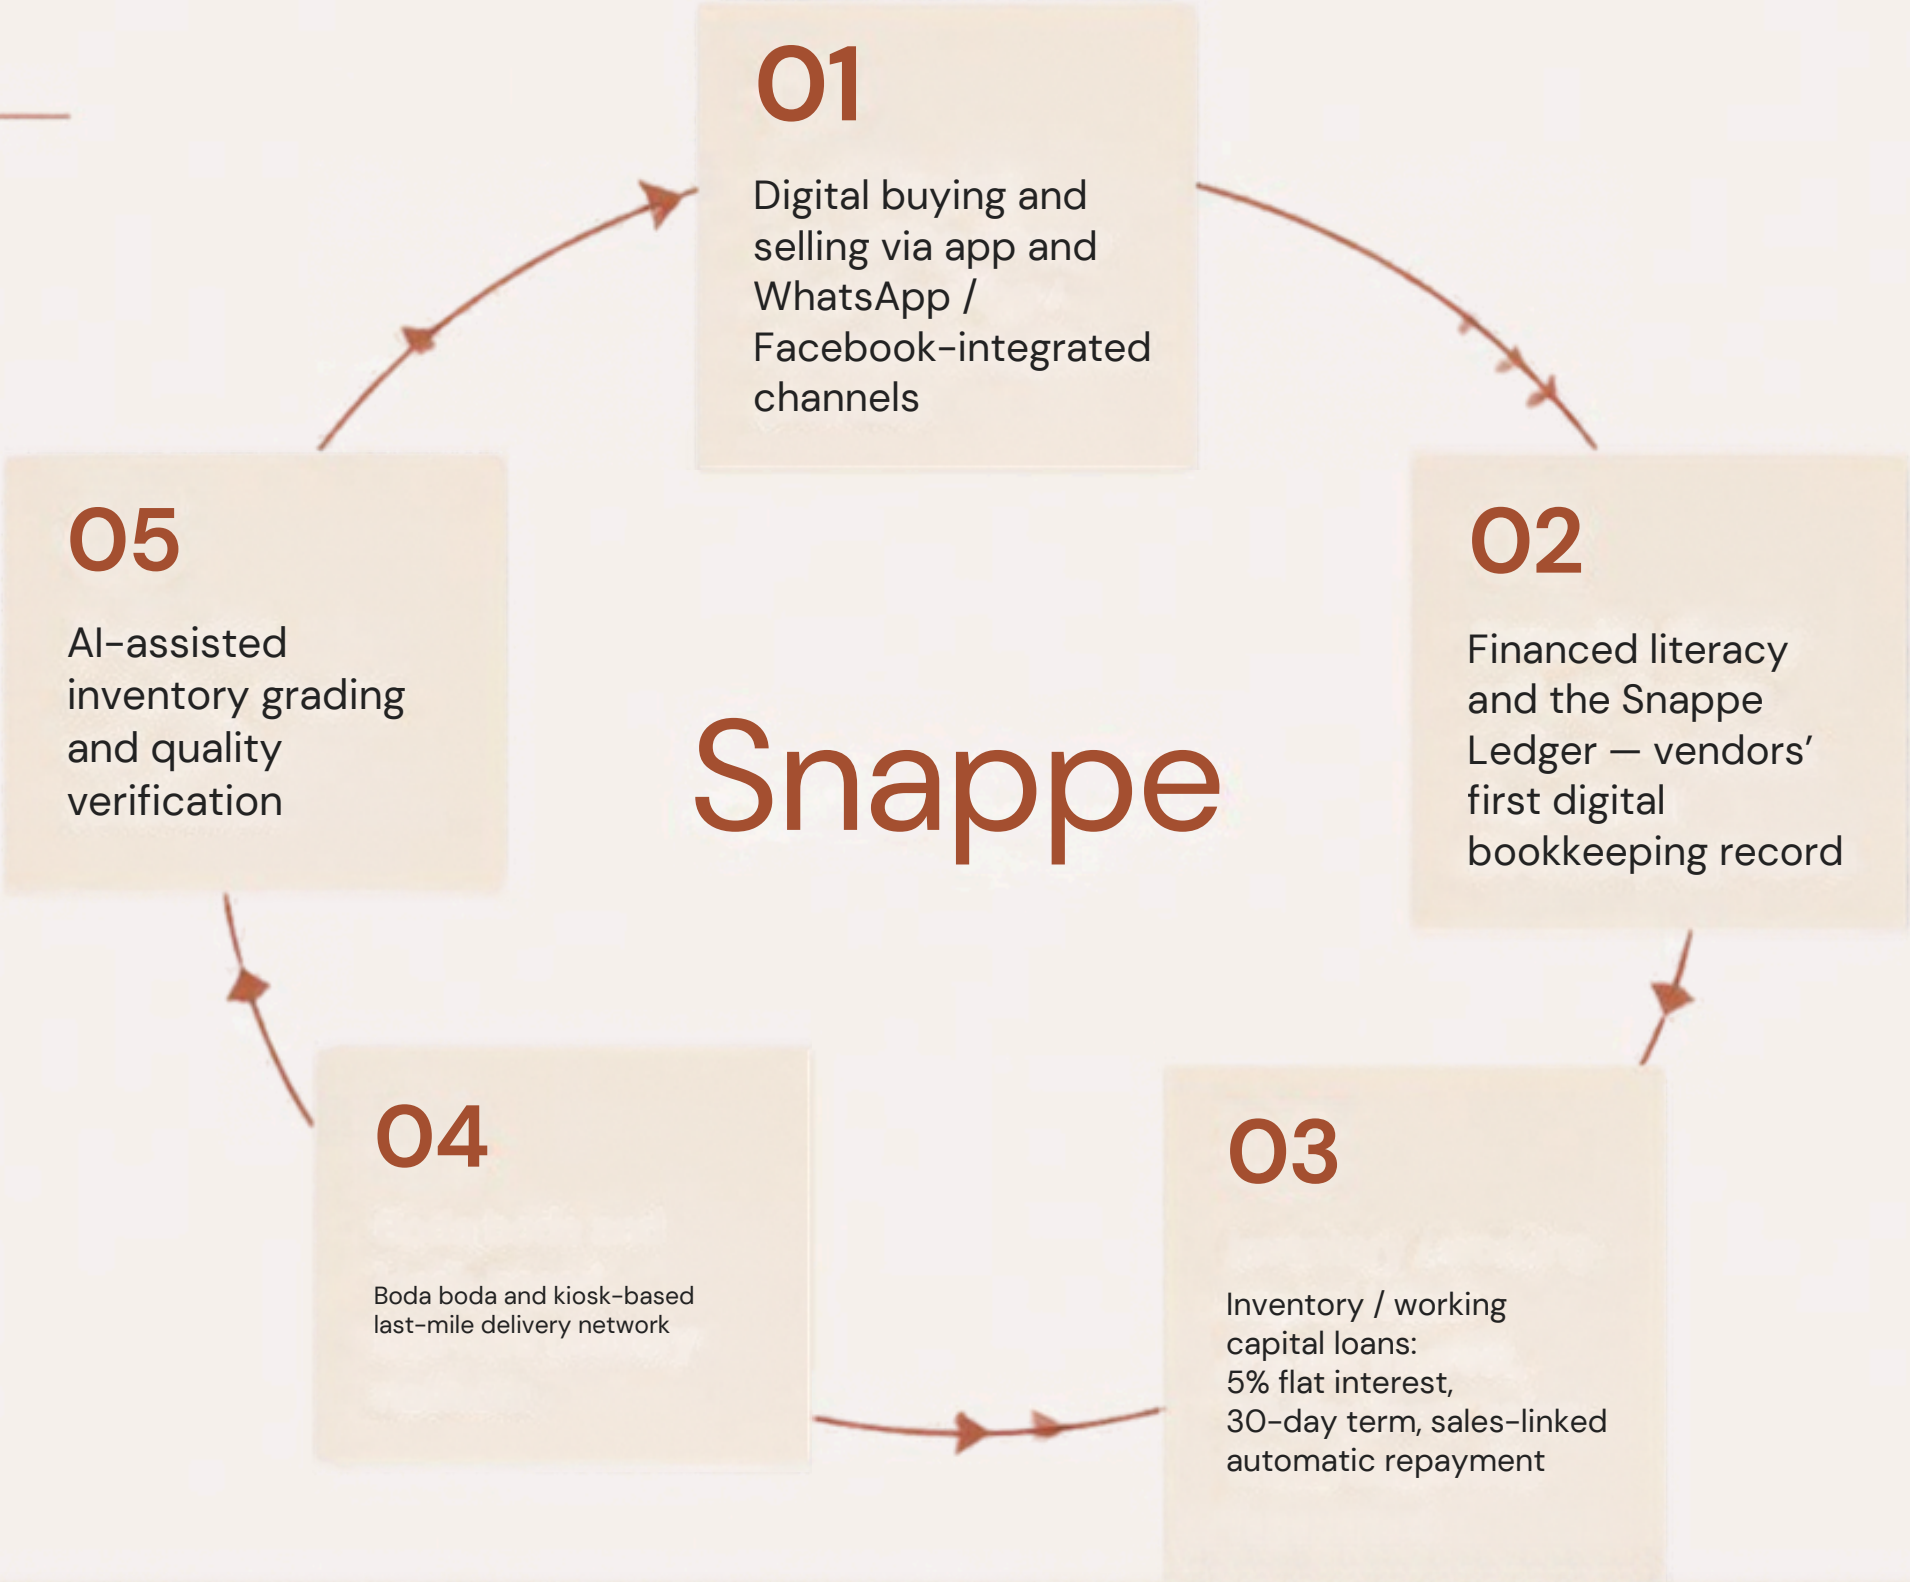

Beta model progressed to MVP.

THE CONCEPT

Five services.
One platform.
Real income.

Snappe connects vendors to capital, customers, delivery, data, and quality—then shares in the value we create together.

REVENUE MODEL

We earn as vendors grow and move more.

5–10%
vendor commission

Rider
commission

Loan
interest income

What we built. What I led.

Co-founded Snappe.

Led product and operations.

Built the vendor, rider and agent network and the banking partnership.

From beta through MVP.

Status: *Paused.*

What Snappe proved. What it didn't.

Financing and logistics alone don't solve an ecosystem's waste problem.

Demand-data feedback back to import decisions is the missing piece.

Capital efficiency matters more than growth speed.

Two well-funded precedents, Zumi and Sendy, both shut down in 2023.
